Message

It is a matter of great pleasure that *SD Technocrates* is organizing its International Conference on “*Emerging Technologies in Engineering, Biomedical, Management and Science* “ on 5-6 March 2016 in Jodhpur, Rajasthan , with the collaboration of *International Journal For Technological Research In Engineering [IJTRE]*.

The recent technologies have changed life style of all in every walk of life. The emerging area like soft-computing, Memory management, high speed computing, artificial intelligence, biomedical engineering, genetic engineering etc. are playing a vital role in various applications in our day to day life. The impact is such a great that the things which were considered fantasies a few years ago are ground realities these days. It has eased our life a lot off course complicating it too.

Today the breadth of knowledge in the life has grown exponentially, while the technology has become increasingly complex. I am sure this conference is going to provide a good platform to discuss the burning issues and recent challenges. The good quality research papers to be presented in the conference would prove a step in this direction. I wish all the delegates a meaningful participation and the conference a grand success.
